Bafflo is a corrugated cardboard baffle designed to enhance attic ventilation and increase the efficiency of insulation by allowing the installer to install or blow insulation to the top plate without interfering with the soffit.

Manufactured to fit any roof pitch, Bafflo is pre-scored and can be used with standard and odd-size openings. Bafflo can be adjusted for greater airflow and is easily installed with a staple gun or hammer tacker.

Bafflo is effective for use in both new and retrofit applications and meets all energy code requirements for air infiltration. Save energy by protecting insulation and reducing heat loss with Bafflo Ventilation Baffle.

#### STANDARD SIZES:

16" x 72"

24" x 72"

- Attic Knee Walls
- Garage Common Walls
- Soffit Blocking
- Floors and Ceilings
- Under Metal Roofing and Siding
