Insullite is a fire retardant recessed light cover designed to allow the installer to insulate safely and effectively around recessed lights. Insulation placed too close can be a fire hazard or cause IC-Rated fixtures to shut off.

Installing Insullite recessed light covers allows insulation to be placed as close to the light or heat-producing fixture as possible without the risk of fire or disruption of the fixture function.

Insullites ship flat to maximize storage and transport efficiency. They are easy to assemble and modify on the jobsite and can be installed in conjunction with other air sealing materials to minimize leakage around the fixture. Insullites also feature a printed ruler that serves as an insulation depth guide.

STANDARD SIZES:

10" x 12"

12" x 14"

- Two Convenient Sizes
- Ships Flat for Space Savings
- Installs in Seconds
- Printed Ruler for Insulation Depth
- Cuts Easily for Framing or Wiring
